

now what?

Just the facts

-  **Genital Herpes.** Known as HSV-2, one in five people in America over the age of 12 has herpes. Antivirus medications help the symptoms but won't cure it.
-  **HIV/AIDS.** Using condoms reduces the risk HIV by 85%, yet you still can end up with it. Expensive drugs for life can maintain it. Is this a price you'll pay?
-  **Chlamydia.** The most common of all STD's. It can be treated with antibiotics, however, it can cause infertility if left untreated. A family you desire in the future may be lost to this STD.

and then some more

Gonorrhea. The second most transmitted bacterial sexual disease. Likewise, future families are on the line.

Trichomonas. A parasite causing more infections per year than all other STD's. Medication can treat it, however, there are numerous side affects.

By the numbers. If everyone had the same number of sexual partners as you, and say you had 7, you have exposed yourself to 127 other people.

**It's true,
we're here to help.**
